How do you unlock a maytag washing machine door

Maytag Front Load washer door locked at install If you have unboxed your front load washer to find that the door is locked and you are unable to open it, please review the following instructions. Plug the appliance into a grounded 3 pronged outlet per the installation instructions. After plugging the washer in one of the following 3 events will happen: The door may immediately unlock. The door lock LED light will blink. The door should unlock after 60 seconds. Nothing else will appear to be happening with the machine during this time. The washer will go into a hold and drain routine for 8 minutes. After 8 minutes the door will unlock. During this period you will be able to hear the pump running. The drum will not spin. Caution: Residual water may be pumped from the drain hose. Please be sure the drain hose is installed in a drain or there is a tub / bucket to catch any residual water. If the door of the washing machine does not unlock after any of the above 3 events, contact customer service to schedule a service call by an authorized service technician. MORE FROM QUESTIONSANSWERED.NET CC0/Pexels/Pixabay Cleaning things that are designed to clean our stuff is an odd concept. Why does a dishwasher need washing when all it does is spray hot water and detergents around? It does though, and the same is true for washing machines. A washing machine washes itself when it runs a cycle but every once in a while it needs a thorough clean to make sure it runs properly. Washing machines filter out a lot of junk from our clothes that we don't think about including fluff and hair. That stuff gets caught in the machine's filter so you'll need to clean that out as part of a thorough clean. Benefits of Cleaning Your Washing Machine On average washing machines last 14 years. When you consider that the average washing machine runs seven cycles per week, that's 364 cycles per year and a total run of over 5,000 washes in its lifetime, that's a long life and you'll only get those numbers if you regularly maintain your machine. The most basic maintenance you can do is to clean it but if you keep the machine on a level surface and don't overload the drum, it will run better and last longer. How to Wash a Top-Loader Front-loaders use less water and are more energy efficient but they're more expensive to buy so top-loaders remain a popular choice. You'll need white vinegar, baking soda, and an old toothbrush before you run the washing machine in its hottest and longest setting to start the cleaning process. Open the lid and wait for the washing machine to fill with water. When it does add a quart of the white vinegar and then close the lid. Now open the lid and put a cup of baking soda into the machine. Let that mix around for a minute and then interrupt the cycle. Leave the lid open for an hour which will give the water, baking soda and vinegar time to mix. In the meantime, remove any parts you can and soak them in the sink. Anything you can't remove should be scrubbed with the toothbrush. When the hour is up, replace everything, close the lid and continue the cycle. How to Wash a Front-Loader You'll also need vinegar and baking soda for this job but the way they're used is a little different. Take a bowl and mix water with the baking soda then add that solution to the washing machine's detergent drawer. Pour two cups of vinegar into the drum and run on the hottest and longest setting. The washing cycle will do the hard work for you so all you'll need to do is to remove stubborn mold with a brush before cleaning any residue with cold water. Other Maintenance Tips You should always use the minimum amount of detergent as using too much will create a film on the drum and hoses that leads to mold. You should also use the minimum amount of fabric softener for the same reasons. Don't let a load finish and sit in the drum for hours as this creates a breeding ground for mildew, and when you've finished emptying the drum leave the door open so that air can circulate inside the machine which will also prevent the buildup of mold. How Often Should You Clean? The recommendation from washing machine makers is to wash the machine once a month. This will help maintain the machine and it will also make sure your clothes come out smelling fresh. If you've taken the time to clean your washing machine, why not do the same with the clothes dryer? To do this, you'll need to turn off the machine, remove the lint filter and clean with a vacuum cleaner, which you'll also need to remove fluff, dust, and hair from the drum. MORE FROM LIFE123.COM In some circumstances, your new washer may arrive with the door locked. This can occur from normal shipping movement. CLICK HERE for more information on how to unlock your washer door when locked at the time of installation Verify that there is nothing blocking the door and the lock mechanism. Always clean the door area for soap build up. Were you using a "Fresh Hold" cycle (available on some models)? When using one of these cycles, the door will remain locked until the cancel button is pushed. This is normal. If the washer will not unlock at the end of a wash cycle, unplug the washer or disconnect power. Wait approximately 2 minutes for control to reset. Reconnect power to washer (plug in). Run a "Drain and Spin" cycle. The door should unlock after this is complete. If not, call for service. If the door will not stay open, verify that the washer is level. The door should stay in place when open, but if the unit is not level, it could swing more easily. Was this article helpful?
